

WE DON'T MOW SO
POLLINATORS CAN GROW!

NO MOW MAY

NO MOW MAY IS AN INITIATIVE TO LIMIT THE MOWING AND CLEARING OF YARDS IN MAY TO PROMOTE HEALTHY HABITATS FOR POLLINATORS.

HOW CAN I HELP?

- Limit or eliminate the use of pesticides
- Get in touch with your representatives to learn how to change lawn-height requirements in your community
- Plant native pollinator-friendly plants or low-mow species
- Create a NO MOW ZONE in your yard

SUPPORT AN ENDANGERED SPECIES!

Endangered Rusty Patched Bumble Bee queens hibernate in our lawns and leaf piles over the winter - they emerge in late-April and into May. Participating in No Mow May helps to protect this species found right here in Southeastern Wisconsin!

We don't need one perfect yard for pollinators - we need thousands of imperfect yards for pollinators!
